Looking Ahead . . .

MICHAEL J. RIBERA, DMD, MS
Friday, October 25, 2019

DR. MICHAEL ABERNATHY, DDS
Friday, October 25, 2019

CHAD DUPLANTIS, DDS, FAGD
Wednesday, October 30, 2019

CHANDUR WADHWANI, BDS, MSD
Sunday, December 8, 2019

Forensic Dentistry Seminar Series
Begin: January 2020

Course information is also available online at cde.sdm.rutgers.edu
Clues to Your Patient’s Health: The Most Prescribed Medications and How They Impact Your Dental Treatment

Your patients are living longer thanks to their medications but many of the physician-prescribed medications used by your patients have dental implications and side effects affecting your treatment plan. Is antibiotic prophylaxis required for patients with an orthopedic prosthesis? What is the new FDA warning about codeine and tramadol in children? How does the opioid crisis impact your daily treatment plans? How is marijuana going to impact your dental treatment?

This presentation includes indications, contraindications and side effects of the most common prescribed medications. Familiarity with these drugs will provide you with a better appreciation for the health profile of your patient.

At the conclusion of this course, you will know:

- Prescription, OTC medications, and foods that could diverely interact with dental drugs.
- Why your patient is taking their medications.
- Impact of medical marijuana on your practice.
- How to minimize prescribing opioids for surgeries.
- How to combine analgesics to maximize their effects.
- Current recommendations for SBE and orthopedic prosthesis prophylaxis.

The Big Three: Opioids, Alcohol, and Marijuana and Their Impact on You, Your Family, and Your Dental Practice!

We will first discuss the addictive nature, abuse, and medicinal benefits of opioids and alcohol. For centuries opioids have been used to control pain and suffering, but at what cost? This section will uncover fascinating details regarding origins and influence of alcohol and opioids and their significant effect on our society today.

The second half will be devoted to marijuana. Twenty-three states have legalized marijuana for medical use. Ten states and District of Columbia have legalized marijuana for recreational purposes. What is Marijuana? Does it have any medicinal use? Is it addicting? What are the effects on driving ability, on intellectual development? We will discuss some concerns about the use/abuse, and its bearing on dental treatment.

Learn:

- The difference between synthetic and natural forms of “the big three.”
- How these drugs have been useful in the past but are abused today.
- Medicinal and recreational effects of these drugs on body systems.
- Physical characteristics of marijuana.
- Evidence supporting medicinal uses.
- Differences between edible, vaping and smoking marijuana.
- The meaning of shatter, dab, wax, and scat.

Wednesday, October 2, 2019
9 a.m. to 5 p.m. (earn 7 credit hours)
at The Pines Manor in Edison, NJ
$235 for Dentists • $165 for Auxiliaries/Residents
Code: 20D0204

Friday, October 4, 2019
9 a.m. to 5 p.m. (earn 7 credit hours)

Prosthetic Strategies for the Esthetic Zone

We will review the challenges in restoring single teeth and multiple missing anterior teeth. The presentation also focuses on a systematic perspective on how to plan implant restorations step-by-step with a multidisciplinary approach.

Various aspects of immediate and delayed implant placement in the esthetic zone are addressed along with a review of prosthetic steps of smile design. Treatment planning is the key. Material selection, screw vs. cement retained designs, and advantages of CAD/CAM technology in everyday practice.

Topics will include:
- Treatment planning for ideal esthetics.
- How to restore anterior single units and multiple unit restorations.
- Immediate placement concepts.
- Abutment design and selection.
- Angulated Screw Channel (ASC Abutment) for single and multi-unit restorations.
- Cement vs. screw retained restorations.
- Prosthetic options using modern CAD/CAM techniques.

Esthetic Management of Implant Supported Restorations

Creating inconspicuous anterior restorations is still a great challenge for clinicians. In recent years, treatment modalities and restorative options have evolved. A multidisciplinary approach is paramount when treating an esthetically and functionally compromised dentition. A review of orthodontic pre-treatment options and prosthetic steps of smile design are incorporated in this lecture. The presentation also includes the influence of digital technology workflow in daily practice, all of which are tantamount to optimum patient treatment.

Topics will include:
- Planning for prosthetically driven implant placement.
- Multi-disciplinary treatment planning concepts.
- A demonstration of the benefits of a digital implant workflow.
- Anterior single and multiple tooth restoration protocols.
- Abutment design concepts.
- Prosthetic options with CAD/CAM technique.

Wednesday, October 16, 2019
9 a.m. to 5 p.m. (earn 7 credit hours)
at the Rutgers School of Dental Medicine

Oral Medicine Clinical Pearls

This interactive, case-based course provides an opportunity for dental providers to develop a level of comfort with identification, description and development of a differential list and action plan for commonly encountered oral pathology and non-odontogenic orofacial pain conditions. Content covers a broad spectrum of soft and hard tissue oral pathology including oral manifestations of systemic disease, and pain of muscular, vascular, neuropathic and systemic origin that clinicians may see in daily practice.

Each case provides a patient's chief complaint, pertinent medical history, and clinical and radiographic data. Specific topics include clinical categorization, appropriate description, diagnostic evaluation and management of oral abnormalities and orofacial pain of local and systemic origin. Diagnosis and salient features that guide evaluation and management process of the case are then disclosed.

Objectives:

• Accurately categorize oral lesions of local or systemic origin to narrow down differential diagnosis.
• Apply appropriate descriptive terminology in documenting soft and hard tissue oral lesions.
• Develop a prioritized list of differential diagnosis for oral lesions consistent with available data.
• Decide on pertinent diagnostic procedures for oral lesions.
• Select appropriate site for biopsy, when indicated.
• Develop a prioritized list of differential diagnosis for orofacial pain.
• Differentiate between odontogenic and non-odontogenic facial pain disorders.
• Perform appropriate diagnostic tests for orofacial pain.
• Accurately obtain an orofacial pain history.
• Develop action plans for management of cases discussed.
• Modify approach to care in light of a patient's medical history.

Faculty:
Department of Diagnostic Sciences
Divisions of Oral Medicine and Orofacial Pain
MAHNAZ FATAHZADEH, BSc, DMD, MSD
GARY M. HEIR, DMD

Friday, October 4, 2019
10 a.m. to 5 p.m. (earn 6 credit hours)
at the Rutgers School of Dental Medicine
$185 for Dentists • $135 for Auxiliaries/Residents
Code: 20D0809

Annual OSHA Update & Hot Topics in Infection Control: Are You Safe Enough?

Review OSHA-required training topics for ordinary and extraordinary situations based on current CDC Guidelines, State Dental Board regulations for Infection Control and OSHA regulations. Updates include challenges such as aerosol transmitted diseases (ATD’s) and evolving / resistant pathogens. Attendees will identify the need to update or change their OSHA injury and illness prevention program.

• Update knowledge of important disease risks and Post Exposure Prophylaxis (PEP).
• Analyze Standard Precautions and their limitations.
• Implement Respiratory Hygiene/ Cough Etiquette.
• Discuss challenges of sharps and waste management.
• Improve effectiveness of environmental asepsis.
• Maximize Instrument reprocessing efforts.

Topic areas (required by OSHA):

• OSHA written program.
• Disease transmission understanding.

Guest Speaker:
NANCY DEWHIRST, RDH, BS
Laguna Beach, California

Ms. Dewhirst graduated from the University of Southern California, practiced dental hygiene for 20 years, is adjunct dental hygiene faculty at West Coast University and has had numerous articles published. She is consistently listed as one of the nation’s “Leaders in CE”, presents over 80 seminars a year at major U.S. and Canadian Dental Conferences.

Periodontics

Total Comfort in Dental Hygiene and Periodontal Treatment: Procedural and Post-Procedural Considerations

A number of common dental procedures, such as tooth scaling with an ultrasonic instrument can result in severe pain. This pain may be a reason patients avoid needed treatment. Post- treatment tooth sensitivity may also be a distressing side effect of periodontal and hygiene procedures.

Topics to be covered:
• Sources of pain in periodontal procedures.
• Management of pain during periodontal procedure.
• Local anesthesia techniques in periodontal pain control.
• Post treatment sensitivity.

KENNETH MARKOWITZ, DDS, MSD, Associate Professor
Departments of Oral Biology and Restorative Dentistry

Medical Update: Review of MD in DMD

The contemporary dentist is presented with medically challenged patients who function independently in society due to recent advances in medical management. Many patients with chronic conditions are managed on an outpatient basis with expected extended lifespans. As a result, the dentist will encounter patients with complex medical conditions that require a thorough understanding of disease processes and implications of dental therapeutic interventions including pharmacological modification.

This course will present an update and review of the more commonly seen medical conditions for dental practitioners. It will present useful and practical management guides for treatment of medically compromised patients, including a review of commonly prescribed medications and their implications to dental treatment.

Objectives:
• Review common medical conditions and current therapeutic interventions.
• Relate medical conditions to their impact on delivery of dental services.
• Discuss patient evaluation in ascertaining relative risks in performing dental procedures.
• Establish guidelines and limitations in the delivery of dental services based upon medical conditions.

Faculty:
Department of Oral and Maxillofacial Surgery

VINCENT B. ZICCARDI, DDS, MD – Course Director
Professor and Chair
PAMELA ALBERTO, DMD, Associate Professor

The Dental Implant Patient: Medical Assessment and Pharmacology

Guest Speaker:
JAMES L. RUTKOWSKI, DMD, PhD
Clarion, Pennsylvania

Participants will be able to identify and manage systemic disease states and medications that commonly present challenges. You will be presented with treatment protocols to effectively manage the medically complex patient.

Topics covered will include:
- Epinephrine drug interactions.
- Effective use of analgesics and identifying which ones will interfere with bone healing and implant osseointegration.
- Effective use of glucocorticoids.
- Pharmacologically sound use of antibiotics.
- Treating patients with diabetes.
- Managing patients who take anti-coagulants, anti-thrombotics, or anti-platelet agents.
- How to manage patients who take bisphosphonates or monoclonal antibodies.

Objectives:
- Learn treatment strategies to improve outcomes for dental patients presenting with complex medical histories.
- Learn how to treat patients who are taking commonly prescribed medications known to affect dental treatment.
- Know when and how to use medications to improve clinical dental outcomes.
- Know an effective analgesic regimen for implant and bone grafting surgeries.
- Know proper antibiotic algorithms for treating patients who present with infection or need antibiotic prophylaxis.
- Understand how to manage patients with a history of radiation treatment to the head and neck.
- Understand importance of proper medical-record keeping.

Friday, October 18, 2019
8 a.m. to 5 p.m. (earn 8 credit hours)
at the Rutgers School of Dental Medicine
$235 for Dentists

Limited Enrollment

Forensic Dentistry 2019: Two Centuries of Service in the USA

Guest Speaker:
LAWRENCE A. DOBRIN, DMD, DABFO
Diplomate American Board of Forensic Odontology
Roselle Park, NJ

Forensics continues to be the hottest subject of television and movies in recent years and continues to pique the interest of the public. There have been many newsworthy tragedies that have increased public awareness concerning the importance of forensic dentistry in the identification of victims. Past and present situations have called upon the forensic dentist to assist in mass disaster events.

There are many aspects of forensic dentistry that will be discussed to better acquaint the professional with a greater understanding of this varied and exciting field of dentistry.

Topics:
- History of events highlighting Forensic Dentistry
- Civil cases in forensic dentistry.
- Evidence for the value of Forensic Dentistry.
- *Child Abuse, Human Abuse and Dentistry.
- Bite Mark Evidence.
- Overview of mass disasters (WTC, Katrina, Flight 587).
- Regional Disaster Planning with Updated Technology.
- Training Exercise.

* The child abuse portion of this program has been approved by the NY State Educational Department to fulfill the continuing education requirement for dentists and other health professionals for licensure.

4 Ways to Register for CDE Courses

On-line: cde.sdm.rutgers.edu

By Phone: 1-866-720-1971 or 973-972-6561 Monday to Friday 8:30 a.m. to 4:30 p.m.

By Fax: 1-973-972-7741

By Mail: Complete & mail form to:
Rutgers School of Dental Medicine
Continuing Dental Education
110 Bergen Street, B701 Newark, NJ 07103

For more information please contact us by:
Phone: 973-972-6561
Email: cde@sdm.rutgers.edu

SUNSHINE ACT STATEMENT.
In compliance with the Physicians Payment Sunshine Act, the Office of Continuing Dental Education may release participants’ names to applicable manufacturers who at times may provide an educational grant, in-kind and/or technical support for our programs.

Registration Information

REGISTRATION FEE includes tuition, registration, handout materials, coffee breaks, lunch for most full-day courses, and other amenities involved in making this a pleasant learning experience. Residents and postdoctoral students must include a letter from their program director verifying status.

REGISTRATION CONFIRMATIONS are sent two weeks prior to the course date. Confirmation includes directions, parking information, room location, registration time, a receipt for tuition paid, etc. We encourage early registration, as this helps to avoid unnecessary course cancellations. If you plan to register late, call to ensure space is available and to confirm logistical details from their program director verifying status.

CANCELLATIONS & SUBSTITUTIONS. Cancellations received up to two working days before a course are refundable, minus a $35 registration service charge (unless otherwise noted in a course outline) – or you may apply the full registration fee toward a future course within the same academic year. After that, cancellations are subject to the entire registration fee.

SPECIAL NEEDS. RSDM complies with the Americans with Disabilities Act. If you require special services, facilities or dietary considerations (vegetarian or otherwise) to support your participation in this activity, please contact Sherri Wilson at 973-972-6561.

PARTICIPANT CREDIT VERIFICATION. All participants are required to sign-in at the start of the course and following lunch. Credit letters will be provided at the end of the day and will not be mailed. Participants arriving late (one-half hour after course begins) or who may need to leave prior to completion will be asked to sign and note their arrival/departure times. Participants should complete the self-reporting section of their credit letters. CDE will adjust the database to reflect the actual number of hours received. The participant’s transcript will reflect actual credit hours if called upon by the State Board to verify attendance.
General Information

CREDIT: The Rutgers School of Dental Medicine (RSDM) is an approved course sponsor by the New Jersey State Board of Dentistry. Our courses, which deal with the scientific or clinical practice of dentistry, professional responsibilities, or ethical obligations of the profession, fulfill Board requirements for dentists’ license renewal. Credit hours are granted on an hour-for-hour basis, provided the course is completed as designed.

RSDM is an ADA CERP Recognized Provider; the current term of acceptance extends to 12/20. ADA CERP is a service of the American Dental Association to assist dental professionals in identifying quality providers of continuing dental education. ADA CERP does not approve or endorse individual courses or instructors, nor does it imply acceptance of credit hours by boards of dentistry. Concerns or complaints about a CE provider may be directed to the CE provider or to ADA CERP at www.ada.org/cerp Rutgers is also an Academy of General Dentistry, approved national sponsor for FAGD/MAGD credit.

NOTE: Dental educational institutions are obligated to disseminate new knowledge related to dental practice. In so doing, some presentations may include controversial materials or commercial references. Sponsorship of a continuing dental education course by the Rutgers School of Dental Medicine does not necessarily imply endorsement of a particular philosophy, procedure, or product by this institution. Rutgers School of Dental Medicine reserves the right to modify course content, faculty and meeting locations; and also reserves the right to cancel a program, if necessary.

NOTE: The registered participant grants permission to the Office of Continuing Dental Education (and its designees and agents) to utilize the participant’s image, likeness, actions and/or statements in any live or recorded audio, video, or photographic display for exhibition, publication, or reproduction made of, about, or at an activity without further authorization or compensation.

The Rutgers School of Dental Medicine is a proud member of the Association for Continuing Dental Education. Founded in 1991, the ACDE provides a forum for cooperative, collaborative and mutual support among directors of university-based CDE programs. The ACDE mission is to provide high quality pro-grams with superior educational value to dental care professionals.
